TECH STACK

Languages
JavaScript TypeScript Dart

Frontend
Next.js React.js
Redux Toolkit Tailwind CSS
Vite

Mobile
React Native Flutter

Backend
Node.js Express.js NestJS

Infra & DevOps
Docker Kubernetes (basic)
GitHub Actions RabbitMQ
Kong Gateway

Databases & BaaS
PostgreSQL MongoDB
Supabase MySQL Prisma
Sequelize

Testing & Tools
Jest / Supertest JWT / OAuth2
RBAC Git / GitHub
Chrome APIs

EDUCATION

HCMC University of Transport
2022 → 2026
B.Sc. Information Technology
GPA: 3.2+/4.0 · Expected Graduation: 2026

INTERESTS

- Distributed systems & cloud architecture
- UI/UX & product thinking
- Open-source contribution

Professional Summary

Final-year Information Technology student at Ho Chi Minh City University of Transport (graduating 2026), with hands-on full-stack experience built through personal and freelance projects. Comfortable working across the stack — React/Next.js on the frontend, Node.js/NestJS on the backend, PostgreSQL for data, and containerized deployment with Docker. Led the design and development of a microservices-based capstone platform end-to-end, from database schema to CI/CD. Quick to pick up new tools and looking to grow as a backend/full-stack engineer in a team environment.

Freelance & Independent Work

Freelance Web Developer

Part-time / Remote ↻ Jan 2025 → Present

Small-scale freelance projects taken on alongside coursework, covering the full build cycle from requirements to deployment.

- Built and deployed small web applications independently for personal clients, handling planning, implementation, and go-live.
- Set up basic CI/CD pipelines (GitHub Actions, Docker) and wrote automated tests (Jest, Supertest) to keep releases stable.

React Node.js TypeScript PostgreSQL Docker

Featured Projects

EV Charging Orchestration Platform · Capstone Thesis

Capstone Project ↻ 2025 → 2026

Cloud-native EV charging platform for my graduation thesis, spanning a Flutter mobile app, React web portal, and a microservices backend for station scheduling and session lifecycle management.

➔ github.com/Victor-201/ev-charging-orchestration-platform

- Designed a booking flow that prevents double-booking of charging slots using queue-based logic and Redis-backed session state, across a set of NestJS microservices.
- Implemented event-driven communication between services with RabbitMQ, with Kong API Gateway handling JWT auth and rate-limiting at the edge.
- Containerized the platform with Docker/Kubernetes and set up a GitHub Actions CI/CD pipeline, with Jest & Supertest test suites for the core services.

Flutter / Dart React TypeScript PostgreSQL / PL/pgSQL RabbitMQ Kong Docker / K8s

WebDev Toolkit · Chrome Extension

Side Project ↻ 2025

Chrome Extension (Manifest V3) bundling developer inspection tools — color picker, font detector, CSS inspector, image downloader, page ruler, and a productivity overlay.

➔ github.com/Victor-201/webdev-toolkit

- Built developer inspection tools using Chrome Manifest V3 content scripts with sandboxed injection, avoiding render-blocking on the host page.
- Persisted user preferences across sessions with the Chrome Storage API, syncing state across open tabs.

JavaScript Chrome Extension APIs HTML / CSS

StudyHub · Social Learning Platform

Full-Stack Project ↻ 2024

Full-stack social learning platform with real-time collaborative study rooms, resource sharing, and group chat — built end-to-end from DB schema to deployed UI.

➔ github.com/Victor-201/studyhub-platform

- Implemented real-time collaborative features with Socket.IO, using room-based communication for isolated study sessions and group chat.
- Rebuilt the frontend with Next.js (SSR + ISR) to improve page load and rendering performance.
- Designed RESTful APIs with JWT authentication and PostgreSQL-backed RBAC for role-based access to platform resources.
